Frederik Østerby Hansen

BSc Computer Science

About me

I am open minded and prefers to consider a wide range of possible solutions, to solve a given problem. I am a fan of a pragmatic approach to development, meaning I value a working solution, delivered on time.

Experience

2010 - 2016, IT assistant

Summer job at Herning Municipality, at their Maps & GIS department. I handled a variety of tasks in regards to the daily operations of their maps services. This was primarily centered around tweaking of HTML/CSS and light Javascript, together with documentation. Furthermore, I helped with configuration and updating of various tools and systems in their server environment. This has not given me significant experience in my field, but it has given me insight into devops (continuous maintenance and development) of server systems, where the users sits in the same organization.

2015 - present, AAU student

As a result of Aalborg University's problem based learning approach, where half of the time is spent on semester projects, in groups of 4-6 persons, I have experience in working as part of a team. This means I have experience with being able to deliver a product on time, before the deadline. This has also given experience with project management, in regards to traditional and agile work methods.

Education

2012 - 2015, HTX - Herningsholm (high school)

2015 - 2018, Bachelor, Computer Science - Aalborg University

2018 - (... 2020), Master, Software Engineering - Aalborg University

Languages

- | | | |
|-------------|---------------|----------|
| ○ C# (.NET) | ○ Java | ○ Python |
| ○ C/C++ | ○ HTML/CSS/JS | ○ SQL |
